Aakash Prajapati

+91 9313058171 apg8128@gmail.com LinkedIn GitHub Portfolio

Technical Skills

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Tailwind CSS, React Router, Responsive Design, Lazy Loading, Error Boundaries

Backend: Node.js, Express.js, REST API Design

Databases: MongoDB, Mongoose ODM

State Management: Zustand, React Query (TanStack Query v5)

HTTP & APIs: Axios (interceptors, error handling), RESTful API integration, Postman

Developer Tools: Git, GitHub, VS Code, Chrome DevTools

Concepts: Performance Optimization, UI/UX Principles, Component Architecture, Caching Strategies

Professional Summary

Full-Stack JavaScript Developer with expertise in the MERN stack, building scalable and performant web applications. Skilled in designing efficient REST APIs and optimizing front-end performance to deliver fast, responsive user experiences. Experienced with modern state management tools like Zustand and React Query to handle complex data flows. Focused on writing clean, maintainable code and solving real-world problems through efficient system design.

Work Experience

Front-End Developer 2023 – Present
Self-Directed Projects Ahmedabad, India

- Engineered production-grade React.js applications with emphasis on component reusability, performance, and maintainability.
- Implemented advanced caching and data-synchronization strategies using React Query (TanStack Query), reducing redundant API calls by up to 40%.
- Designed and consumed RESTful APIs using Axios with request interceptors, structured error handling, and optimistic UI updates.
- Applied lazy loading, code splitting, and image optimization techniques to improve initial load time and Lighthouse performance scores.
- Practiced clean code principles including separation of concerns, DRY methodology, and component-driven architecture.

Projects

CoinGecko Cryptocurrency Tracker 2024

- Built a multi-page real-time cryptocurrency dashboard consuming the CoinGecko public API, displaying live market data, price charts, and coin detail pages for 1000+ assets.
- Leveraged React Query (TanStack Query) for intelligent data fetching, background refetching, and caching.
- Implemented Error Boundary components to gracefully catch runtime exceptions and prevent full application crashes.
- Optimized application performance by implementing lazy loading for images, reducing initial load time, and improving user experience
- Created dynamic coin detail pages that fetch and display comprehensive data for individual cryptocurrencies when clicked from the home page
- Used React Router for dynamic routing and seamless SPA navigation.

Full-Stack MERN Application 2023

- Designed and implemented RESTful API endpoints in Express.js with proper HTTP status codes, input validation, and structured error responses.
- Modeled and managed data in MongoDB using Mongoose schemas with optimized queries.
- Developed responsive React.js frontend using Tailwind CSS for cross-device compatibility.

Education

Gujarat University Ahmedabad, India
Bachelor degree Graduated: March 2023
